

SEMINAR NAME

Nulab's Winter Seminars July / August 2004

DIGITAL CAMERA EXPOSURE & LIGHTING

Presenter: Michael Warshall

In this three hour seminar we will show you practical use of both the Kodak DCS Pro and Fuji S2 cameras specifically, yet the information covered can be applied to all digital cameras.

We will have a studio environment set up in our lecture theatre for a practical display.

This is NOT a Camera Sales session.

The idea of this seminar is to show you how to correctly light, expose and shoot with a Digital Camera.

AREAS TO BE COVERED:

- Studio Lighting - A step by step guide to correct lighting and exposure in the Studio Environment for varied subjects.
- Outside Lighting - Subject to weather we will venture around the corner to Braeside Park and provide a step by step guide to Digital Exposure in varied light and shadowed areas.

This will be a practical seminar and we encourage you to bring your cameras and laptop with you. The exposures taken will be sent to the lab during the period and the results shown to you.
